Description
The City Arena, together with the Anton Malatinsky football stadium, is an important architectural, functional and urbanistic townbuilding element in Trnava. Its space allows a spacious interior solution for business and services, as well as convenient football matches. Concrete builders have preferred the use of Fibrofor's technology due to convincing experience with its reliability and functionality.

- Key advantages of the Fibrofor High Grade Solution :**
- Massive reduction of the construction time of the floor
 - Lower cost for the reinforcement due to the replacement of the steel
 - Lower processing costs (no installation time for steel)
 - No corrosion and low maintenance costs (jointless)
